Nimbus Technologies Pvt. Ltd.

IT and Information Security Policy

Document No: IT-POL-001 | Version: 3.0 | Effective: 01 January 2026
Policy Owner: IT Security (security@nimbustech.example)

1. Purpose

This policy protects Nimbus data, systems and customers. It applies to all employees, contractors and interns.

2. Passwords and Authentication

- Passwords must be at least 12 characters and include upper-case, lower-case, a number and a symbol.
- Passwords expire every 90 days. The last 5 passwords cannot be reused.
- Multi-factor authentication (MFA) is mandatory for email, VPN, GitHub and cloud consoles.
- Never share your password with anyone, including IT staff. IT will never ask for your password.

3. Acceptable Use

- Company devices are for business use. Limited personal use is allowed if it does not affect productivity or security.
- Installing unapproved software is prohibited. Request software via the IT Service Desk portal.
- Do not use personal email, WhatsApp or unapproved cloud storage (e.g. personal Google Drive) to share company files.
- Using generative AI tools is allowed only with approved tools. Never paste source code, customer data or confidential documents into public AI chatbots.

4. Data Classification

Level	Examples	Handling Rule
Public	Marketing material, job postings	No restriction
Internal	Policies, org charts, meeting notes	Share only within the company
Confidential	Customer data, financials, source code	Need-to-know access, encrypted storage
Restricted	Passwords, keys, employee personal data	Strictly limited; approval from IT Security

5. Reporting Incidents

Report suspected phishing, lost devices or data leaks immediately to security@nimbustech.example or call the IT helpline at extension 4444. Report within 1 hour of discovery. Do not attempt to investigate on your own.

6. Phishing

If you receive a suspicious email, use the Report Phishing button in Outlook. Do not click links or open attachments. IT runs simulated phishing tests every quarter; repeated failures require refresher training.

7. Device Management

All laptops are encrypted (BitLocker/FileVault) and managed by IT. Screens lock after 5 minutes of inactivity. Lost or stolen devices must be reported to IT within 1 hour so they can be remotely wiped.

8. Offboarding

On the last working day, IT disables all accounts and collects company devices. Employees must return all assets before final settlement is processed.
